SUMMARY

Junior Backend Developer (BSc CS, GPA 3.85) with practical experience building Django REST APIs, real-time systems, and Redis-backed WebSocket messaging. Strong in authentication, database design, Linux server setup, and producing documented, production-ready code.

TECHNICAL SKILLS

- Languages & Frameworks: Python, Django/DRF, JavaScript, HTML/CSS, C#
- APIs & Backend: REST API design, routing, serializers, permissions, Firebase token auth
- Databases: SQLite, Firebase, Redis (caching/pub-sub), SQL fundamentals, schema/ER design
- Real-Time Systems: WebSockets, Redis optimization, async/sync patterns
- DevOps & Tools: Linux configuration, debugging/logging, basic deployments, Git/GitHub
- Testing: Manual testing, basic unit testing (pytest/unittest), A/B testing concepts
- Other: Rapid prototyping, technical documentation, team collaboration

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Coursera)
- Coursera — Applied Machine Learning in Python; Mathematics for ML (Linear Algebra)
- Skillbox — Python Developer with Django
- RedHat Academy — Red Hat System Administration I (RH124)

SELECTED PROJECTS (ALL ON GITHUB)

StudyBuddy — Real-time Collaboration App (Django, Firebase, Redis, WebSockets)

- Built full backend (Django + Django REST Framework) with API endpoints, URL routing, serializers, and permission classes.
- Implemented Firebase Authentication for secure token-based access and page-level authorization.
- Integrated WebSocket-based chat with Redis caching and pub/sub to optimize message delivery and reduce load.
- Firebase metrics dashboards and used engagement data (50+ users) to prioritize features.
- Responsibilities: API design, authentication/authorization, message queue integration, performance tuning, documentation.

Campus Navigation Prototype (Python, routing algorithms, backend data processing)

- Processed location data and built routing backend; produced server-side logic to compute optimized routes and return JSON endpoints for front-end integration.
- Designed data models and evaluated routing performance using logs and analytic metrics.

Character Image Analysis & Recognition (Python)

- Backend preprocessing pipeline for images: resizing, normalization, feature extraction, and preparing data endpoints for model training and evaluation. Visualized misclassification cases and reported performance metrics.

EXPERIENCE & LEADERSHIP

Student Developer / Project Co-lead — Navigation System & StudyBuddy (University Projects)

- Led backend architecture, managed backlog, and mentored teammates on best practices for API development and deployment.
- Produced analytic summaries and dashboards to inform product decisions during university competitions.

AWARDS

- **WorldQuant Hackathon** — Ranked 10th out of 300 participants for developing predictive financial alphas.

EDUCATION

Bachelor of Computer Science (AI) — Asia Pacific University, Kuala Lumpur

GPA 3.85 / 4.0 — Relevant coursework: Web Development (Django), Databases, Algorithms, Operating Systems, Software Engineering

ADDITIONAL

- Languages: English, French
- GitHub: github.com/mariiaivanovacs — all projects, code, and documentation
